
Citizen Browser
SevaOne UI (React)
Department System (portal + backend)
WSO2 Identity Server (9443)
WSO2 APIM (Department Gateway 8243)
SevaOne BFF (.NET 10)
Redis Cache
PostgreSQL (portal schema)
Phase 1: Hand-off. SevaOne sends the citizen to the department
1 Click "Apply" on a department service
2 POST /api/v1/departments/{dept}/schemes/{code}/apply-token (citizen gateway)
3 Store hashed JWS apply-token (portal.sevaone_token, 30 min)
4 Redirect URL carrying the encrypted one-time token
5 Browser redirected to the department's own domain
6 Open department URL with the encrypted token
Phase 2: The department proves who it is (machine identity)
7 POST /oauth2/token (client_credentials, scope dept:{code})
8 Access token (Bearer)
Phase 3: The department redeems the citizen token
9 POST /api/v1/dept/user-details {token} + ApiKey + Bearer
APIM checks the ApiKey (api_key-only scheme) and stamps X-SevaOne-Dept-Gateway-Secret
10 Forward request with the stamped secret
DeptGatewayAuthMiddleware rejects any request without the secret (fails closed)
11 Look up the Bearer verdict (introspection cache)
alt
[Cache miss]
12 POST /oauth2/introspect
13 {active: true, scope: "dept:{code}"}
14 Cache the verdict (60 s at most)
Department identity comes from the dept:{code} scope. A departmentId in the body must match it.
15 Decrypt token, look up hash, verify JWS and department
16 Redeem once (atomic), load citizen and service
17 200 Citizen profile (token now consumed, via gateway)
The citizen completes the real form and pays on the department's side
opt
[Fee reported to SevaOne]
18 POST /api/v1/dept/payment-status {token, status, amount, txn}
19 Forward with secret (same identity checks)
20 Record payment status (token valid until midnight)
21 200 OK
Phase 4: Completion and return to SevaOne
22 POST /api/v1/dept/get-acknowledgement {SevaOneUserId, ServiceId, Status, AcknowledgementId}
23 Forward with secret (same identity checks)
24 Create the application row once (SVK reference, Sakala due date)
25 Mint one-time completion token (10 min)
26 {linked: true, returnUrl, expiresAt}
27 Redirect browser to returnUrl
28 GET /api/v1/apply/return?token=... (citizen gateway)
29 302 redirect to the SevaOne dashboard
Phase 5: Ongoing status updates, long after the citizen has left
loop
[Whenever the department changes the status]
30 POST /api/v1/dept/status-update {AcknowledgementId, Status, Note}
31 Forward with secret (same identity checks)
32 Apply the status change to the timeline
33 {accepted: true, changed}
