Service Plus: Architecture as Known Today

Drawn only from what the NIC deck, the conversation and the API documents state. Dashed amber boxes are not disclosed.

Stated by NIC · Not disclosed

M1 to M25 are the module numbers used in the architecture documents.

1 People who use it

Citizen / applicant
Applies by self or assisted mode, tracks, gets alerts, lodges grievances
M8

Assisted-mode operator
Applies for a citizen through a centre
M13

Officer (workflow)
Reviews, remarks, acts on assigned cases
M9

Service owner
Configures the service, grievance policy, launch
M4

Appellate authority
Up to three levels
M15

use

2 Channels

Web portal
Responsive forms, all devices
M8

Mobile app
ServicePlus mobile app and API for other apps
M8

Branded entry points
Pages and URLs per service, per department or for the whole deployment
M4

Assisted mode
Franchise logins (K1, B1, G1, AJSK, BSK)
M13

configure

apply and process

3 Set up a service (design time)

Form Designer
Drag and drop, multi-page, multilingual · Applicant and official forms, field links, · checks, help text, JavaScript insertion
M5

Process Flow Designer
Drag and drop workflow · Conditions, fork and merge, timer tasks, · webservice tasks, real-time monitoring
M7

Document Designer
Templates for acknowledgement, · delivery, rejection, intermediate certificates · QR, DSC stamp, watermark, unique URL
M10

Notification Designer
Content and trigger points · SMS, email, Sandes, WhatsApp · OTP verification, bulk module
M12

Organisation structure
Departments, hierarchy, designations · Jurisdiction mapping between departments · Constituency data
M2

Service lifecycle wizard
Guide, tenancy extension, configure, test, · train, freeze, activate service units, · assign users, launch. Major and minor versions
M17

Business rules: rule injection, Velocity templates, MVEL and JavaScript insertion are listed in the history slide (slide 5).

published services

4 Run a service (run time)

Form rendering
Shows the configured forms to applicants and officials
M5

Workflow execution
Moves each application through the designed steps
M7

Worklists and cases
Role-based access, task queues, remarks, history
M9

Tracking and alerts
Status online, alerts for submitted applications
M8

Grievance handling
Policies, routing, escalation, three appeal levels
M15

Bulk, FIFO, derived services
Listed in the history of capabilities (slide 5)
M21

Multi-tenancy and role-based access
Claimed in the deck (slides 6, 7, 20). How tenants are separated is not described.
M19

calls out

5 Supporting capabilities

Document generation
PDF, HTML, XML, spreadsheet outputs
M10

Notifications
SMS, email, Sandes, WhatsApp
M12

Payments
Gateways and wallets (right)
M11

SPReport
Dashboards, filters, exports, role access
M16

Security as claimed
SSL/TLS encryption and OAuth 2.0 authentication (slide 6). Security audit results and controls are not described.
M3

Service delivery acts and grievance policy
Administrators can define policy "in line with service delivery acts". No act is named.
M15

6 Connected systems

Identity
Aadhaar, DigiLocker, JanParichay
M14

Signing
eSign
M14

Payments
BharatKosh, SBI ePay, PayU, BillDesk, ICICI, CSC eWallet
M14

Money transfer
PFMS and DBT
M14

Messaging
Sandes, WhatsApp, SMS, email
M14

Other
eTaal, any REST API, sync and async data sharing, UMANG launch API
M14

7 Foundation

Database and storage
Product, schema and document storage are not disclosed

Hosting and deployment
Servers, tenants, availability and recovery are not disclosed

Source and internals
Code, component boundaries and versions are not disclosed

Data export
Whether service settings and applications can be exported is not disclosed

8 NIC roadmap (slide 21, completion not shown)

Sept 2024
Bhashini, Elasticsearch, RabbitMQ

Nov 2024
SPReport with live data

April 2025
Microservices

July 2025
Docker containers

May 2026
Web apps from ServicePlus
