Token-Based Integration: Department Plug and Play

Target contract (Seva Sindhu Token-Based Integration, V3): what SevaOne sends, what a department provides, and what the department calls back.

Service · Request · Event or callback · Data store · Runs on a separate server

A Users

Citizen
Logs in to Seva Sindhu directly

Assisted-mode operator
Franchise login: K1 / B1 / G1 / AJSK / BSK

log in: citizen or assisted mode

1

B SevaOne (EDCS)

Login, token and redirect
Citizen or assisted-mode login. Issues the token and the unique edcsApplicationRefNo.
Sends the browser to the department with an auto-submitting POST form.

Understanding needed: token format and lifetime

URL 2: acknowledgement receiver API
POST .../api/TokenIntegration/department-update (UAT path shown in the document)
Content-Type: application/json · Authorization: Basic · JSON request with payment and acknowledgement
Answers DepartmentApplicationUpdateId, or "Data Not Inserted" on failure

Understanding needed: production URL and credentials

6

SevaOne database
Application response, payment details, acknowledgement file
Status: SUCCESS, or Failed until the department calls URL 2 again
The acknowledgement is printed from here

URL 3 client: status check
Asks the department or Sakala (GSE) for the status of an application
Request carries the GSC number

8

IP allow-list in both directions

browser POST form

2

redirect back to SevaOne

7

POST JSON · Basic auth

5

POST { GscNumber }

C Department

URL 1: Department URL
Accepts a POST form: UserId, edcsApplicationRefNo, Token, assistedmode,
ServiceId, plus mobile and digilockerid when the department needs them. Answers HTTP 200.

Understanding needed: how the token is checked

3

Application form and fee
The citizen fills the form and pays the department fee on the department's own site

4

Final acknowledgement
The department generates the acknowledgement and calls URL 2 on SevaOne
If the call fails, it must call again until it succeeds

URL 3: status check API
Provided by the department, or by Sakala (GSE)
Looks an application up by its GSC number

Understanding needed: response format
